

Project Profile Sheet

Owner: Fresno Cogeneration Partners, LP
Location: San Joaquin, California
Owners Engineer: IEC Corporation
Output: 21 MW
Time Line: April 2001 to August 2001
Scope:

Installation of an FT4 Power Pac combustion Turbine Generator. This included foundations, undergrounds, electrical, piping, mechanical and start-up support. TTS Construction self performed a majority of the work.

This relocated unit had been in storage. In addition to construction of the unit, TTSC crews worked around the ongoing refurbishment of the client supplied equipment. This unit was placed next to an operating combined cycle unit, requiring a multitude of safety precautions.

- Project Keys:**
- Refurbishment of equipment
 - Fast Track Schedule
 - Integration into an existing live facility
